to east edge of concrete sidewalk 0.04 m. (4 cm.)

to N 380 utility trench stake 20.00 m.

Informants

April 22/72 DHT met a Mr. Grove at the Friendsville Site (18 WA 23). He lives on RT 42 at top of hill on the side of the river from the site. He said that his wife's grandfather or great grandfather (he was not certain which one it was) once owned the land on which the site (18 WA 23) is located. However he (Wigrfah) sold or exchanged the land for another section of land with higher elevation in the hills.

Mr. Grove pointed SW of the site. This exchange was made because in the flood plain near the river there is an early frost while in the hills the frost comes later. At the time the exchange was made the late frost was necessary in order to have sufficient time for the corn to ripen. This factor is not important to say because of the development of new kinds of corn.

Comment: One wonders if

this ecological factor would have any effect upon late prehistoric

GA23-70014b

agriculture and settlement patterns?

This was taken from a copy of the original census file of the National Archives in Washington D.C.

Sandy Creek Hundred became District No. 2 in Garrett Co. The voting place was at Selbysport. The Glades Hundred became District No. 1; the voting place was at Ingman's Tavern near Swanton.

Sandy Creek Hundred 1800

A total of 98 families
